

Pocket Buddy

Restaurant Offer & Deal Platform

A centralized platform connecting hungry users with the best restaurant deals — simple, secure, and always in your pocket.

Project Overview

What It Is

A platform to find, manage, and redeem restaurant offers in one place.

Who It Connects

Users looking for deals and restaurant owners wanting to attract customers.

Why It Matters

Helps users save money and helps businesses grow their customer base.

The Existing System

How It Works Today

- Offers scattered across social media, apps, and websites
- No centralized place to find all deals
- Users waste time searching multiple sources
- Restaurants struggle to reach the right audience

⚠️ Fragmented information leads to missed opportunities for both users and businesses.

The Problem We're Solving

No Single Source of Truth

Restaurant offers exist in too many places — social media, flyers, third-party apps — making it hard to compare or track deals.

Information Overload

Users spend more time searching than saving. Scattered data leads to frustration and missed savings.

The Gap

There is a clear need for a **centralized, easy-to-use platform** that brings all restaurant offers under one roof.

Project Objectives

01

One Platform for All Offers

Aggregate every restaurant deal into a single, searchable destination.

02

Easy Search & Discovery

Enable users to find relevant offers quickly using filters and categories.

03

Empower Restaurant Owners

Give businesses a simple way to create, manage, and promote their deals.

Core Features

Role-Based Access

Three distinct roles — **Admin**, **Restaurant Owner**, and **User** — each with tailored permissions.

Search & Filter

Users can search by location, cuisine, or deal type to find the perfect offer.

Offer Management

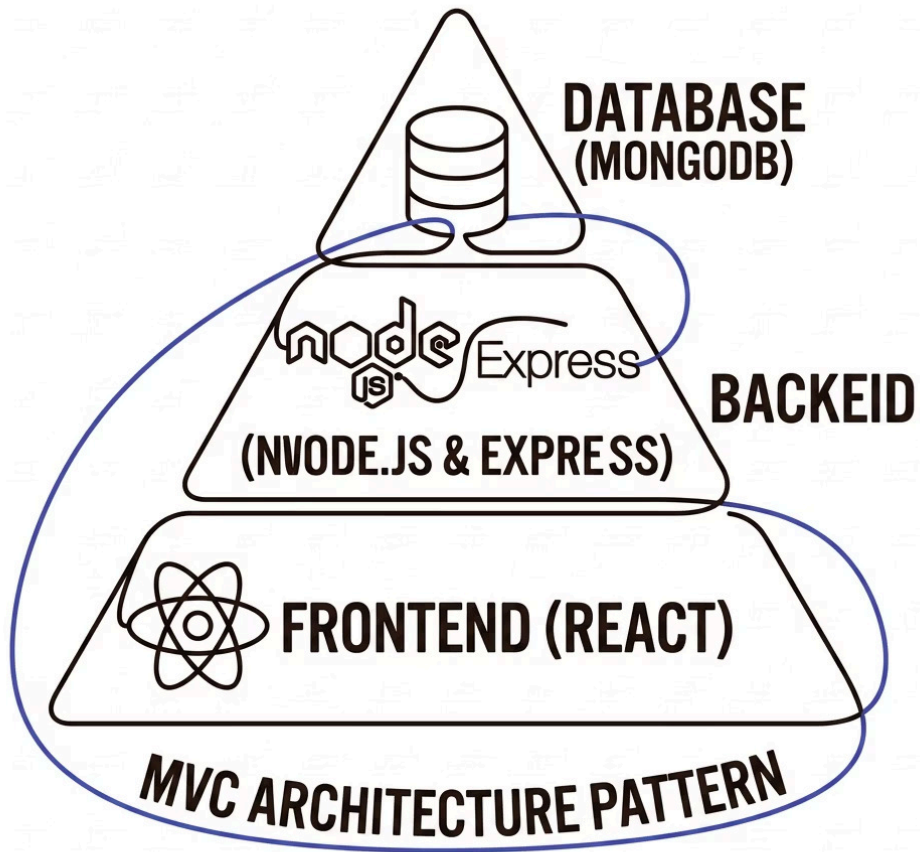

Owners can **add, update, and delete** offers. Admins oversee all content.

Redemption System

Users request to redeem offers; owners approve or decline — all tracked in-app.

System Architecture

Technology Stack

Frontend

React — responsive, component-based UI

Backend

Node.js & Express — RESTful API layer

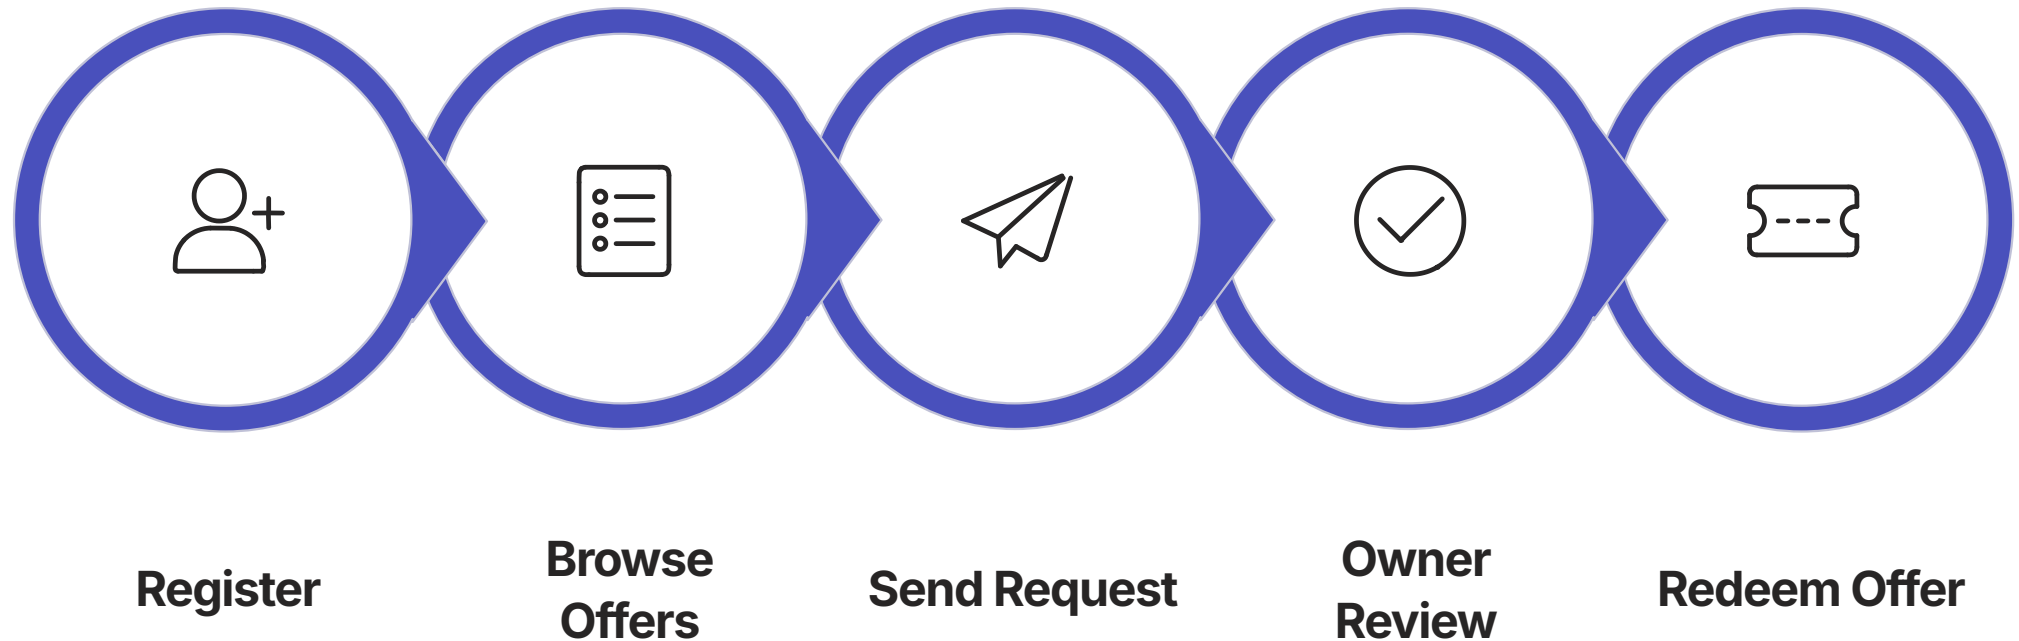

Database

MongoDB — flexible, document-based storage

Built on **MVC architecture** for clean separation of concerns and easy maintenance.

System Flow

Here's how a typical user journey works from registration to redeeming an offer:

This streamlined flow ensures a smooth experience for both users and restaurant owners, with clear approval steps built in for trust and accountability.

Advantages & Limitations

Advantages

All-in-One — Every restaurant deal in a single platform

User-Friendly — Intuitive design for all skill levels

Secure — Role-based access and controlled redemption

Limitations

Internet Required — No offline functionality

Adoption Dependent — Value grows with active users and restaurants

Moderation Needed — Admin oversight required for offer quality

Conclusion

Simplifies Discovery

Pocket Buddy makes finding restaurant deals effortless for every user.

Win-Win Platform

Users save money; restaurant owners gain visibility and customers.

Built to Scale

Modular architecture allows future features like reviews, loyalty programs, and more.

Pocket Buddy — Your pocket-sized solution for smarter dining.
